EDUCATION

Degree	Institution	Year	Percentage/CGPA
B.Tech - CSE	Maharaja Agrasen Institute of Technology, Delhi	2023 - 2027	CGPA: 8.23
Senior Secondary (CBSE)	Taksila Public School, New Delhi	2021 - 2022	Percentage: 80.2%

WORK EXPERIENCE

Summer Internship - Artificial Intelligence, Machine Learning Cybersecurity June 2025 – July 2025

- Worked on practical applications of Machine Learning algorithms, model training, and evaluation using Python.
- Learned network security, encryption, and threat detection basics.
- Collaborated in research-based tasks integrating AI-driven approaches to enhance cybersecurity and participated in expert-led technical sessions.

PROJECTS

Explainable Discount Recommendation System (Polished, Industry-Level) [\[GitHub\]](#)

- Built an end-to-end ML system to identify discount-responsive but non-loyal customers, helping businesses optimize discount allocation and avoid unnecessary incentives to already loyal users.
- Solved the absence of a labeled target by designing a business-driven target variable using discount sensitivity and order-frequency thresholds, aligning model predictions directly with real-world growth strategy.
- Developed the project in an industry-style modular architecture, exposing predictions via a Flask REST API, visualizing results in a STREAMLIT dashboard, and integrating Global Local SHAP for transparent, interpretable decision-making.

AI-Powered Expense Tracker (Next.js, Prisma, PostgreSQL, Gemini AI, Clerk) [\[Website\]](#) [\[GitHub\]](#)

- Architected a full-stack AI expense tracker using Next.js, Prisma, and PostgreSQL, establishing a secure and scalable backend for robust financial data management.
- Integrated the Google Gemini API to deliver intelligent expense categorization and generate deep, personalized financial insights, forming the core AI functionality of the application.
- Engineered a secure and modern user experience with Clerk for authentication and a dynamic UI with Tailwind CSS, featuring interactive charts for intuitive data visualization.

Twitter Sentiment Analysis Using NLP and Machine Learning (End To End) [\[GitHub\]](#)

- Built an end-to-end Sentiment Analysis system using a 1.6M tweets dataset, applying NLP preprocessing (tokenization, stopword removal, stemming) and TF-IDF feature extraction.
- Trained and compared Logistic Regression, Naive Bayes, and SVM, selected Logistic Regression as the best model, and improved performance through hyperparameter tuning.
- Deployed the final model using Flask, integrating a clean CSS-styled UI, and serialized model components with pickle for real-time sentiment prediction.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C++ and MySQL

Technical Skills: Machine Learning Models, Natural Language Processing, Web Development, Flask, StreamLit, Data Structures and Algorithms, Dockers, ReactJs, Tailwind CSS, Git, Scikit-learn, Vercel, NodeJs, ExpressJs, SHAP, MongoDB.

ADDITIONAL

Soft Skills: Communication, Problem Solving, Leadership, Observation, Adaptability, Responsibility, Flexibility.
